

2026 KIPDA Regional Hazard Mitigation Plan Update (OCFC Aug. 18th, 2026)

Purpose and Scope

- The KIPDA region is required by the federal government (FEMA) to update this plan on a 5-year cycle to ensure that our communities remain eligible for FEMA-sponsored funding such as the Flood Mitigation Assistance Program (FMA) and the Hazard Mitigation Grant Program (HMGP).
- Last regional plan update was published in 2022 and will expire on Jan. 27th, 2027.
- KIPDA is currently drafting the plan update and is slated to be submitted to the state (KYEM) and FEMA in late September/early October.
- The 2026 KIPDA HMP will cover all KY KIPDA counties of Bullitt, Henry, Oldham, Shelby, Spencer and Trimble. Jefferson Co. publishes their own as KY's largest municipality.
- HMP includes hazard profiles on all major natural disasters affecting the region and includes information such as:
 - Detailed and updated data on historical occurrence/probability of occurrence.
 - Hazard vulnerability analysis of each county/city as it relates to these natural disasters.
 - Critical facility data, updated and cross-referenced with hazard data.
 - Mitigation actions (past, present, and future) which detail various stakeholder projects relating to disaster preparedness.
 - Public survey data from each county/city.
 - Any other information obtained through various stakeholder engagement/meetings with public officials, utility operators, emergency managers, first responders, and more.
